

Brainstorming & IDEA Prioritization Template

Date	07-07-2026
Team ID	
Project Name	Credit Card Approval Prediction
Maximum Marks	3 Marks

Step 1: Brainstorm and Idea Listing

Each team member lists out as many ideas as possible without judging them at this stage.

S.No	Team Member	Idea / Suggestion	Category	Group No.
1	Dabbeeru Sarath Kumar	Predict credit card approval using applicant details such as income, age, employment status, credit history, loan amount, and existing debt.	ML Prediction	2
2	Vardhineedi Raja	Perform data preprocessing including handling missing values, Label Encoding, One-Hot Encoding, and StandardScaler to improve model performance.	Data Preprocessing	2
3	Dabbeeru Sarath Kumar	Compare multiple machine learning algorithms such as Logistic Regression, Decision Tree, Random Forest, and XGBoost to select the best-performing model.	Model Development	2
4	Vardhineedi Raja	Evaluate model performance using Accuracy, Precision, Recall, F1-Score, and Confusion Matrix.	Model Evaluation	2
5	Dabbeeru Sarath Kumar	Develop a Flask web application with Home, About, Credit Card Prediction, and Contact pages.	Deployment	2
6	Dabbeeru Sarath Kumar	Display prediction results with approval status, probability score, and rejection reason (if applicable) in a user-friendly interface.	UI/UX	2
7	Vardhineedi Raja	Deploy the application on Render for public access through a secure web URL without local installation.	Deployment	2
8	Vardhineedi Raja	Future enhancement: Integrate bank APIs, real-time credit score verification, document upload, and explainable AI.	Future Enhancement	2

Step 2: Idea Prioritization

Rate each grouped idea on feasibility and importance, then select the final idea(s) to move forward with.

Group No.	Final Idea	Feasibility (High/Medium/Low)	Importance (High/Medium/Low)	Priority	Selected (Yes/No)
1	ML-based Credit Card Approval Prediction using applicant details (Income, Age, Employment Status, Credit History, Loan Amount, Existing Debt, etc.), developed as a Flask web application and deployed on Render	High	High	1	Yes
2	Comparison of multiple Machine Learning algorithms (Logistic Regression, Decision Tree, Random Forest, XGBoost) to select the best-performing model	Medium	High	2	No
3	Future enhancement with real-time credit score verification, bank API integration, document upload, and Explainable AI (XAI) for transparent decision-making	Low	Medium	3	No
