Empathy Map

Create an empathy map to understand your customer/user from four perspectives — what they Say, Think, Do, and Feel — in relation to the problem your project addresses. This helps the team build a customer-centric solution.

Persona: *Rahul, a salaried employee, is applying for a credit card to manage expenses and build his credit score. He wants a quick and fair approval process.*

SAYS • “I hope my credit card gets approved.” • “I submitted all the required documents.” • “Why is the approval taking so long?” • “I want to know if I am eligible.”	THINKS • “Do I have a good credit score?” • “Will my income be enough?” • “What if my application gets rejected?” • “Can the approval process be faster?”
DOES • Fills out the credit card application. • Uploads identity and income documents. • Checks the application status regularly. • Compares different bank offers.	FEELS • Anxious about approval. • Confused about eligibility criteria. • Hopeful for a quick response. • Relieved when the application is approved.
