

No. of Functional Features Included in the Solution

Date	09-07-2026
Team ID	
Project Name	Automated Credit Card Approval Prediction using Machine Learning
Maximum Marks	5 Marks

Functional Features Overview:

Metric	Count / Value
Total Features Planned	8
Total Features Implemented	8
Core / Must-Have Features	Crop Prediction, User Input Form, ML Model Loading, Data Validation, Crop Recommendation Display
Additional / Nice-to-Have Features	GitHub Repository, Flask Multi-Page Interface (Home / About), Dataset Integration
Features Tested & Verified	8 / 8 (100%)

This document lists all the functional features included in the project solution. Each feature is described with its purpose, implementation status, and contribution to the overall solution.

S.No	Feature Name	Feature Description	Module / Component	Status	Marks Contribution
1	User Input Form	Accepts applicant details such as Age, Income, Employment Status, Credit	Flask HTML Form (predict.html)	Done	High
2	Data Validation	Validates user input and converts values into the required format before prediction.	Flask Backend (app.py)	Done	Medium
3	Crop Prediction	Predicts whether the credit card application is Approved or Rejected	Prediction Engine (Logistic Regression)	Done	High
4	ML Model Loading	Loads the trained Machine Learning model and preprocessing files (.pkl) during application startup.	Model Loader	Done	High
5	Crop Recommendation Display	Displays the approval or rejection result with a user-friendly interface.	Output Module (result.html)	Done	Medium

6	Dataset Integration	Uses the Credit Card Approval dataset for model training and prediction.	Dataset Loader	Done	Medium
7	GitHub Repository	Maintains the complete source code using GitHub version control.	Version Control	Done	Low
8	Flask Deployment	Deploys the Flask application on Render for public access.	Application Interface	Done	Medium

Feature Summary:

Feature Category Breakdown:

S.No	Category	Features in Category	Example Features
1	User Interface (UI)	3	Home Page, Credit Card Prediction Form, Result Page
2	Backend / Logic	3	Input Validation, Machine Learning Prediction, Model Loading
3	Database / Storage	1	Credit Card Approval Dataset (CSV), Trained Model (credit_card_model.pkl)
4	API / Integration	1	Flask routes integrating with the ML model
5	Security / Authentication	0	Not implemented
