

Demonstration of Proposed Features

Date	13-07-2026
Team ID	XXXXXX
Project Name	Automated Credit Card Approval Prediction using Machine Learning
Maximum Marks	1 Mark

Demonstration of Proposed Features:

This document captures all the features that were proposed during the project planning phase and tracks whether each feature was successfully implemented and demonstrated. It serves as evidence of the team's ability to deliver on the proposed solution.

S.No	Feature Name	Description	Status (Implemented / Partial / Pending)	Demonstrated (Yes / No)	Remarks
1	Applicant Information Form	Collects applicant details such as age, income, employment status, credit score, loan amount, and existing debt through a web interface.	Implemented	yes	Successfully demonstrated using the Flask application
2	Data Validation & Preprocessing	Validates user input, handles preprocessing, encoding, and feature scaling before prediction.	Implemented	yes	Produces clean input for the Machine Learning model
3	Credit Card Approval Prediction	Predicts whether the application is Approved or Rejected using the trained Machine Learning model.	Implemented	yes	Model generates accurate predictions in real time.
4	Prediction Result Display	Displays the approval or rejection result instantly after processing the applicant's information.	Implemented	yes	User-friendly result page successfully demonstrated.
5	Multi-Page Flask Web Application	Includes Home, About, Prediction, and Result pages with smooth navigation.	Implemented	yes	Navigation between pages works correctly.
6	GitHub Integration & Render Deployment	Project source code maintained on GitHub and Flask application deployed on Render for public access.	Implemented	yes	Application accessible through a public deployment link.

Feature Implementation Summary:

Total Features Proposed	6
Total Features Implemented	6
Total Features Demonstrated	6
Overall Implementation Rate (%)	100%
